MUON ELECTRON RELEASE NOTES

Decompressing the electronic distribution package of the Muon Electron software constitutes acceptance of the following terms and conditions:

1. The Electron program and supplementary files provided ("The Software") are copyright Muon Software Ltd 2002. The Software may not be copied or distributed (by any means, mechanical or electronic). This covers, but is not limited to, posting to websites, newsgroups or sending via e-mail. Doing so would violate copyright law and is a criminal offence.
2. You are granted a license to use The Software on one computer only at a time. You may not resell, rent or otherwise transfer The Software to another party for benefit.
3. The Software has been extensively tested. Unfortunately, due to wide variance in computer and software configurations no guarantee or warranty can realistically be offered or expected. Therefore, no warranty either express or implied is given as to fitness for a particular purpose.
4. In areas where limited guarantees/warranties cannot be enforced the maximum available remedy will be, in case of dispute, the actual price you paid for The Software.
5. In the event of The Software being found to be defective, the remedy for purchasers is limited to an updated version of The Software as and when one is made generally available.
6. Muon Software Ltd cannot be held responsible for any direct or indirect/consequential loss or damage caused by the use of, or inability to use, The Software.
7. Use of The Software is entirely at your risk.
8. You are encouraged to be careful with your amplification and monitoring equipment.

EXTRACTING THE PRODUCT FILE CONSTITUTES ACCEPTANCE OF THE TERMS OF THIS AGREEMENT

Installation Instructions

1. PC Users: Run "setup.exe" and follow the prompts. Make sure you install the correct VST or DXi version for your sequencer platform.
2. Mac Users (full install): Copy the file with a VST-style icon named "Muon Electron" (or "Muon Electron Demo" where appropriate) into your sequencer's "vstplugins" folder.

v1.12 Known Issues

1. Background graphics do not update whilst a knob is being turned in many hosts (Logic Audio, Orion, Fruity Loops). This is not a bug in the Electron but the host software itself, and is not harmful.
2. Mac users with Digidesign Digi001 soundcards may experience problems when using the Digi001 audio driver. Use Sound Manager instead.
